PROBLEM - SOLUTION FIT: PROJECT NAME :

A NOVEL METHOD FOR HANDWRITTEN DIGIT RECOGNITION SYSTEM

Team Members: -Jerin Joel.J, Arjun Dinesh S, Augustine E, Srivignesh R

8.CHANNELSOF BEHAVIOUR

1.CUSTOMER SEGMENT(S):	5. AVAILABLE SOLUTIONS	
The Customers who deal with handwritten digits like Banking sectors , schools , colleges , railways , firms , etc.	There are no widely used software's to detect handwriting; instead, they check with other people to affirm what number it is.	Using software that is available on the internet. Obtaining assistance from those nearby in order to recognise the digits written by their customers.

2. JOBS-TO-BE-DONE/PROBLEMS:	6.CUSTOMER CONSTRAINT(S):	9. PROBLEM ROOT CAUSE
Handwritten digits can be difficult to understand and interpret at times. It may cause errors when dealing with rough handwriting.	They believe that the alternatives will result in errors and faults and will be inconvenient.	We face numerous challenges in handwritten number recognition. because of different people's jotting styles and the lack of Optic character recognition This investigation offers an in-depth comparison of various machine literacy and deep literacy

3. TRIGGERS	7. BEHAVIOUR	10. YOUR SOLUTION
To obtain the numbers accurately and quickly.	Finding the best software for detecting accurate digits in a more efficient manner	A solution to this problem is the Handwritten digit recognition system, which uses a picture of a digit and recognises the digit present in the image. Convolutional Neural Network model built with PyTorch and applied to the MNIST dataset to recognise handwritten digits.

4. EMOTIONS :BEFORE/AFTER

Feels frustrated and sad when numbers are not entered.
